Market Information

The Joliet Submarket's accessibility attracts a mix of national retailers, third-party logistic companies, and manufacturers seeking distribution hubs. It is driven by its location near 2 major interstates and access to 2 massive intermodal terminals, the BNSF Logistics Park Chicago and UP Joliet Intermodal, which serve as critical components to Asian import/export supply chains in the Midwest given their direct rail access to all major West Coast port markets and ability to easily handle and process large quantities of goods.

These advantages drive robust demand with net absorption totaling 4.9 million SF over the past 12 months, second only to the South I-55 Corridor.

Developers consistently target the Joliet Submarket, bringing nearly 7.0 million SF of new supply to market during the past 12 months. Despite inventory growth, vacancy declined by 1.8% over the past year, currently posted a vacancy rate of 5.2%.
