- ASN, EDI, API, and customized data integrations
- Automated document creation and notifications

Our Process

Workflow and Business Processes

- System-guided stock movement and workflow
- Unique ID number applied to each pallet product during receipt
- Transactions are confirmed with wireless scanners, which verify product, unique ID, and bin location.
- Additional product verification requirements configured for items requiring lot or serial number, product expiration date, or other customer specific product data
- Customer defined product allocation and pick strategy – FIFO, supplier, country of origin, packaging
- Labeling and Packaging
- OEM requirements and packaging process for automotive plants
