EXECUTIVE SUMMARY

RiskCheck Environmental (RiskCheck) was retained by 2830085 Ontario Inc., herein also referred to as the “Client”, to carry out a Phase I Environmental Site Assessment (ESA) of the commercial property located at 2830085 Ontario Inc. in Thornhill, Ontario (subject property). For the purposes of this report, Glen Cameron Road is assumed to be orientated in an east-west direction. The Phase I ESA was completed in general accordance with the requirements of the Canadian Standards Association (CSA) Standard Z768-01, as reaffirmed in 2022.

The subject property is located on the south side of Glen Cameron Road, approximately 650 m east of its intersection with Yonge Street in Thornhill, Ontario. The legal description of the subject property was described as *LT 12 REGISTRAR'S COMPILED PLAN 10327 MARKHAM ; MARKHAM*. The subject property appeared to be generally rectangular in shape and reportedly comprised a total area of approximately 0.60 acres (or approximately 2,428 m²). The subject property consisted of a one-storey commercial building with no basement (subject building). The subject building reportedly had a total building area of approximately 9,226 ft² (857 m²) and was constructed in approximately 1969.

Authorization to proceed with this Phase I ESA was granted by Mr. Lotus Zhang of 2830085 Ontario Inc. on August 22, 2025. RiskCheck understands that the Client requires this investigation for their due diligence purposes.

The following potential environmental concerns from past and current activities in the neighboring properties have been identified:

- Current and historical auto service operations at the neighbouring property immediately to the west, at 83 & 85 Glen Cameron Road with suspected aboveground storage tanks (ASTs); and
- Current and historical auto service operations at the neighbouring property immediately to the east, at 91 & 93 Glen Cameron Road with suspected ASTs.

A Phase II ESA is recommended to be completed at the subject property to confirm the subsurface conditions at this time based on the above noted potential environmental concerns.

The following additional finding was also made by RiskCheck:

- Based on the construction of the subject building in approximately 1969, there is the potential for ACMs to be present in building materials at the subject property. Suspected ACMs in the accessible areas of the subject building included drywall joint compound associated with drywall walls and ceilings, acoustic ceiling tiles, flooring finishes, piping and mechanical insulation, caulking and roofing materials. At the time of the site visit, the condition of the above noted ACMs, where observed in the accessed areas of the subject property, were generally noted to be in good condition. No asbestos survey or asbestos management program (AMP) was provided to RiskCheck for review at the time of the site visit. An asbestos survey will be required for the subject property in accordance with Ontario Regulation (O. Reg.) 278/05 under the Ontario Occupational Health and safety Act (OHSA). An AMP should be implemented if ACMs are confirmed to be present in the subject building.

A Hazardous Building Materials Survey should be completed prior to any renovations and/or building demolition activities.

At the time of issuance of this report, a response had not been received from the Ontario Ministry of the Environment, Conservation and Parks (MECP) Freedom of Information and Privacy Office regarding a search of their records for any pertinent information on the subject property. Should further information be received which alters the conclusions of this report, an addendum will be forwarded to the Client.

The statements made here in the Executive Summary are subject to the same limitations outlined in Section 8. - *Closure* and are to be read in conjunction with the remainder of the Phase I ESA report.

1. INTRODUCTION

RiskCheck Environmental (RiskCheck) was retained by 2830085 Ontario Inc., herein also referred to as the “Client”, to carry out a Phase I Environmental Site Assessment (ESA) of the commercial property located at 2830085 Ontario Inc. in Thornhill, Ontario (subject property). For the purposes of this report, Glen Cameron Road is assumed to be orientated in an east-west direction. The Phase I ESA was completed in general accordance with the requirements of the Canadian Standards Association (CSA) Standard Z768-01, as reaffirmed in 2022.

The subject property is located on the south side of Glen Cameron Road, approximately 650 m east of its intersection with Yonge Street in Thornhill, Ontario. The legal description of the subject property was described as *LT 12 REGISTRAR'S COMPILED PLAN 10327 MARKHAM ; MARKHAM*. The subject property appeared to be generally rectangular in shape and reportedly comprised a total area of approximately 0.60 acres (or approximately 2,428 m²). The subject property was reportedly owned by the Client Inc. A location plan is presented as Figure No. 1 in Appendix A.

Authorization to proceed with this Phase I ESA was granted by Mr. Lotus Zhang of 2830085 Ontario Inc. on August 22, 2025. RiskCheck understands that the Client requires this investigation for their due diligence purposes.

1.1. Property Description

At the time of the site visit, the subject property consisted of a one-storey commercial building with no basement (subject building). The north portion of the subject building comprised office spaces, while the south portion comprised warehouse space. The subject building was occupied by a fencing contractor and used for the storage of fencing materials at the time of the site visit. The subject building reportedly had a total floor area of approximately 9,226 ft² (857 m²) and was constructed in approximately 1969.

The subject property is bounded by commercial properties to the west and east, by residential properties to the north across Glen Cameron Road, and by the CP railway line to the south, with additional commercial properties located further south.

A site and surrounding land use plan is presented on Figure No. 2 in Appendix A. Selected photographs of the subject property are presented in Appendix B.

2. SCOPE OF INVESTIGATION

The Phase I ESA was completed in general accordance with the requirements of the CSA Standard Z768-01, as reaffirmed in 2022. The scope of this Phase I ESA consisted of the following:

- i. Review of historical records (where reasonably available) for the subject property and neighbouring properties including available previous environmental reports (provided by the Client), city directories, fire insurance plans (FIPs) and aerial photographs to evaluate the current environmental condition at the subject property;
- ii. Assess the physical setting of the subject property and environs using reasonably available topographic and physiographic maps, and geological and hydrogeological information;

- iii. Review of an Environmental Risk Information Services Ltd. (ERIS) report for the subject property and surrounding properties;
- iv. Review of available property underwriters' plans, property underwriters' reports and other available records from Verisk, formerly Opta Information Intelligence (Opta) for the subject property;
- v. Contacting provincial agencies to determine the existence of any records for the subject property regarding environmental regulatory non-compliance or environmental impacts;
- vi. Conduct interviews with personnel knowledgeable about the subject property and its history;
- vii. Complete a site visit to assess the current environmental condition of the subject property and a visual assessment of the surrounding properties (where visible from the subject property and/or publicly accessible areas); and,
- viii. Complete a report and provide recommendations for further actions or investigations, if any.

For the purposes of this investigation, the Phase I ESA study area was generally defined as a radius of approximately 250 m from the subject property and the above noted resources were consulted up to the maximum extent of the Phase I ESA study area (see Figure No. 1 in Appendix A).

A Phase I ESA does not include any intrusive testing and/or laboratory analysis of site conditions, and no intrusive testing and/or laboratory analysis of site conditions was authorized under this Phase I ESA scope of work. The Phase I ESA is not intended to fulfil the requirements of Ontario Regulation (O. Reg.) 153/04 (as amended), inclusive of filing a Record of Site Condition (RSC) with the Ontario Ministry of the Environment, Conservation and Parks (MECP).

No deviations and/or enhancements were required to the Phase I ESA scope of work from those as described in the CSA Standard.

3. RECORDS REVIEW

3.1. General

A historical review was undertaken to assess potential environmental impacts from prior use of the subject property and neighbouring properties. RiskCheck conducted a review of records and files including computer databases, city directories, previous environmental reports, FIPs, and aerial photographs (where reasonably available or as provided by the Client). RiskCheck also contacted the Technical Standards & Safety Authority (TSSA), Verisk (formerly Opta), ERIS, and the MECP Freedom of Information and Privacy Office regarding the subject property.

3.2. Previous Environmental Reports

No previous environmental reports were provided to RiskCheck for review.

3.3. Physical Setting

3.3.1. Topography, Geology and Hydrogeology

The topography of the subject property was generally observed to be flat with a gentle downwards slope to the east.

Geology

A review of the Quaternary Geology of Ontario, Southern Sheet; Ontario Geological Survey, Map 2556, scale 1:1,000,000 (Barnett, P.J., Cowan, W.R., and Henry, A.P., 1991) obtained from the Ontario Ministry of Energy, Northern Development and Mines (MENDM) indicated that the subsurface soil conditions in the vicinity of the subject property consisted of predominantly silt to silty clay matrix, high in matrix carbonate content and clast poor (Halton Till [Ontario-Erie Lobe]).

A review of the Ontario Geological Survey (1991), Bedrock Geology of Ontario, Southern Sheet; Ontario Geological Survey, Map 2544, scale 1:1,000,000 and obtained from the MENDM, indicated that the bedrock type in the vicinity of the subject property consisted of shale, limestone, dolostone and siltstone (Georgian Bay Formation, Blue Mountain Formation, Billings Formation, Collingwood Member and Eastview Member).

In addition, a review of the ERIS report and Ontario Wells records indicated that the subsurface soil at the subject property generally consisted of brown silty clay beneath the asphalt, extending to a maximum depth of approximately 4.27 metres below ground surface (mbgs), underlain by grey clay to the boring termination depth of approximately 6.71 mbgs.

Hydrogeology

The subject property and surrounding area were reportedly municipally serviced, and wells were not required to supply potable water. Based on a review of the Atlas of Canada (Natural Resources Canada) interactive topographic maps database (Map 030M13), groundwater was inferred to flow to the east towards the Don River, located approximately 470 m east of the subject property. However, foundations, buried utilities/services, subsurface drainage (including septic) systems and zones of local, natural high permeability soils (sand seams/lenses and fissures) and zones of buried rubble (concrete and building stone, metal) may significantly alter the groundwater movement. Shallow groundwater may be encountered as a perched layer on underlying soils of low permeability or buried floor slabs.

No records of static groundwater level information were identified for the subject property. The nearest available record pertains to monitoring wells installed in 2018 at a neighbouring property to the east, located approximately 140 metres away at 107 Glen Cameron Road, where static groundwater levels were reportedly recorded at approximately 6.2 mbgs across all three monitoring wells.

A subsurface investigation (i.e. boreholes and/or monitoring wells) and/or hydrogeological investigation would be required to accurately assess the soil permeability and other hydrogeological characteristics for the subject property. Installation of groundwater monitoring wells (a minimum of three) would be required to assess groundwater levels and to determine the flow direction on the subject property. It is expected that groundwater levels would seasonally fluctuate, and groundwater levels may be different, if monitored at different points in time.

3.3.2. Water Bodies and Environmentally Sensitive Areas

No water bodies were observed on the subject property and in the vicinity at the time of the site visit. The nearest identified water body was Don River, located approximately 470 m east of the subject property, serving as a tributary to Lake Ontario, which is located approximately 18 km to the south.

A review of the Ontario Ministry of Natural Resources and Forestry (MNRF) natural heritage map did not identify any environmentally sensitive areas within the Phase I ESA study area.

3.3.3. Aerial Photographs

Available aerial photographs from 1954, 1970, 1978, 1988, 1995, 1999, 2005, and annually from 2011 to 2024 (from York Maps) were reviewed by RiskCheck.

The subject property was noted to consist of agricultural and/or undeveloped land until approximately the late 1960s. The subject building was first identified in the 1970 aerial photograph, at which time it appeared to have been constructed in a configuration generally consistent with present-day conditions.

The neighbouring residential properties to the north across Glen Cameron Road appeared to have been constructed in approximately the 1960s. Commercial and industrial properties within the Phase I ESA study area along Glen Cameron Road and Doncaster Avenue also appeared to have been developed during the 1960s, with additional neighbouring commercial properties to the west at 71, 75, 79, and 81 Glen Cameron Road constructed in the mid-to-late 1970s.

There were no other pertinent findings noted in the aerial photographs reviewed.

3.4. Fire Insurance Plans

RiskCheck contacted Opta (as detailed in section 3.6) to access any available FIPs for the Phase I ESA study area. No FIPs for the Phase I ESA study area were reportedly available for review.

3.5. City Directories

The city directories at the Toronto Reference Library were previously accessed for the subject property and the immediate adjacent/neighbouring properties and were reviewed for this Phase I ESA. RiskCheck reviewed selected years in the available city directories for the subject property and the adjacent/neighbouring properties generally between 1973/74 and 2001.

The subject property was listed under Cudek S, Rayson Cudeck & Co, and Rayson Philip G (presumed accounting firm), Harding Communications/Harding Corp (presumed telecommunications servicing), J S Enterprises (presumed business consultant), and Record-A-Call of Canada (presumed call recording services or equipment supplier) in 1974 and 1976; A-All Service Ltd. (presumed general maintenance or contracting services), Dictograph Corporation Ltd., Dictograph Mobile Corporation Ltd., and Interconnect Communications Ltd. (all presumed recording machine suppliers) in 1980; Royal Court Foods Intl Inc. (presumed food importer/exporter) and KP Graphics (presumed graphic design and branding company) in 1990; Chocolada (presumed bakery) and KP Graphics in 1995; and as Beacon Field Corporation

(presumed business services company), Cyboray Electric Design Company (presumed electrical components design company), and KP Graphics in 2001.

The following pertinent findings were noted for the surrounding properties in the city directories reviewed:

- The neighbouring property immediately to the west at 85 Glen Cameron Road was listed as Circo Flex (presumed circuit board manufacturer), Cook C. Lee (presumed professional office), and Mesam Supply Ltd. (presumed pneumatic power transmission equipment and parts importer) in 1974 and 1976, as Circle Flex in 1980, not listed in 1990 or 1995, and not listed in 2001.
- The neighbouring property located approximately 20 m to the west at 83 Glen Cameron Road was listed as Beauty Without Cruelty (presumed cosmetics manufacturer), Golden Krunch Cereals, and Sunny Crunch Foods (presumed cereal manufacturers) in 1974, as Beauty Without Cruelty in 1976, Tann Group Ltd. (presumed cosmetics or related products manufacturer) in 1980, not listed in 1990, and as Mid West Automotive (presumed auto repair shop) in 1995 and 2001.
- The neighbouring property immediately to the east at 91 Glen Cameron Road was listed as Compu-Data Ltd. (presumed computer services and support company) and Turner McCabe & Associates (presumed accountancy firm) in 1974 and 1976, and was not listed in 1980, 1990, 1995, or 2001.
- The neighbouring property located approximately 20 m to the east at 93 Glen Cameron Road was listed as Calder-Gilchrist and Associates Ltd. (presumed professional consulting firm) and Thornridge Holdings Ltd. (presumed private investment/real estate holding company) in 1980, not listed in 1990, and as North Toronto Mazda Parts (presumed automotive parts supplier) in 1995 and 2001.
- The neighbouring property located approximately 30 m to the west at 79 Glen Cameron Road was listed as Dual Temp Engineering Ltd. (presumed HVAC contractor) and Muun Sheet Metal Ltd. (presumed sheet metal fabricator) in 1974 and 1976, and was not listed in 1980, 1990, 1995, or 2001.
- The neighbouring property located approximately 45 m to the west at 81 Glen Cameron Road was listed as Deyong T. Limited Consulting Engineers (presumed engineering consulting firm), Tworzynski B. J. Ltd. (presumed professional office), and Willowdale Artisans (presumed artisan workshop or crafts business) in 1974 and 1976; as Deyong T. Limited Consulting Engineers in 1980; as Altstedter Arthur Ltd. (presumed professional services office), Deyong T. Limited, Park Plastic Products Ltd. (presumed plastics manufacturer), and TACS – a division of Planned Business Solutions (presumed business consulting/accounting firm) in 1990; as Deyong T. Limited, Hubbard G. David Associates (presumed consulting firm), Park Plastic Products Ltd., Plaston Consultants Limited (presumed plastics industry consultants), and TACS (Planned Business Solutions) in 1995; and as Data Tech Environment (presumed environmental consulting firm), Deyong Engineering Ltd., F. M. Windows (presumed window supplier/installer), Fanatic Promotions (presumed marketing/promotions business), Molly Maid (residential/commercial cleaning service), National Wholesale Lumber (building materials supplier), Park Plastic Products Ltd., and TACS (Planned Business Solutions) in 2001.

- The neighbouring property located approximately 35 m to the east at 95 Glen Cameron Road was listed as Canadian Sealants Limited (presumed waterproofing service contractor) and Garon Litho (presumed printing shop) in 1974; as Canadian Sealants Limited and Hartland A (presumed professional services or office tenant) in 1976; not listed in the 1980s; as C. D. Nova-Tech Inc. (presumed technology/engineering firm), Saville B. A. & Associates Ltd. (presumed consulting firm), and Wodex Technology Incorporated (presumed electronics/technology firm) in 1990; as First Canadian Auto Inc. (presumed auto repair shop) in 1995; and as Linwood Motor (presumed auto repair shop) in 2001.
- The neighbouring property located approximately 60 m to the east at 97 Glen Cameron Road was listed as International Health Foods Ltd (presumed health food supplier) in 1974, Crescent Enterprises and Crescent Salvage Co (presumed auto recycler) in 1976, H-Q Equipment Sales (presumed equipment distributor) and Marshall Refrigeration Co Ltd. (presumed refrigeration contractor) in 1980, Adaptive Microelectronics Ltd (presumed electronic display manufacturer) and Affordable Security Sys Inc (presumed security systems supplier) in 1990, Admic Controls (presumed controls/electrical systems manufacturer) in 1995 and 2001.

There were no other pertinent findings noted in the city directories reviewed.

3.6. Verisk (Formerly Opta) Records

RiskCheck initiated a search for property underwriters' reports, property underwriters' plans, and any other FIPs available from Verisk (formerly Opta) for the subject property. A 1977 Siteplan Report was available for the subject property and was ordered for review.

No pertinent information was identified from the 1977 Siteplan Report. A copy of the Verisk report is provided in Appendix C.

3.7. ERIS Database Report

The ERIS Database Report consists of historical environmental information compiled from governmental and private source records (including federal, provincial and private databases). The extent of historical environmental information varies with each database and current information is determined by what is available to ERIS at the time of their report preparation. The ERIS Database Report, including a brief description of each of the databases searched for the Phase I ESA is included in Appendix D. A summary of reportable and pertinent information associated with the subject property and/or neighbouring properties is provided below.

Subject Property

The following pertinent database entries were found for the subject building.

Database	Description
Ontario Regulation 347 Waste Generators Summary (GEN)	- KP Graphics/ROI Marketing Limited registered with waste generator number ON1402900 from 1990 to 2016 to generate waste class 145 – paint/pigment coating residues, 213 – petroleum distillates, and 264 – photoprocessing wastes.
Scott’s Manufacturing Directory (SCT)	- K P Graphics listed as “Digital Printing”, “Other Printing”, “Quick Printing”, “Commercial Printing, Lithographic”, “Commercial Printing, Not Elsewhere Classified”, established in 1970.

Neighbouring Properties

Relevant database entries for the adjacent/neighbouring properties identified in the ERIS Database Report are described in the following table:

Database	Address	Description	Location Relative to the Subject Property
Certificates of Approval (CA)	93 Glen Cameron Road	- Autocars North (1983) Inc. approved for an industrial air certificate for the operation of a waste oil furnace in 1994.	- Approximately 20 m to the east; down -gradient
Ontario Spills (SPL)	83 Glen Cameron Road	- One record for Overland Express for the release of potassium hydroxide solution onto a roadway due to a container leak in 1989.	- Approximately 20 m to the west; up -gradient
Scott’s Manufacturing Directory (SCT)	81 Glen Cameron Road	- Park Plastic Products Ltd. listed as “All Other Plastic Product Manufacturing”, “Showcase, Partition, Shelving and Locker Manufacturing”, “All Other Plastic Product Manufacturing”, and “All Other Miscellaneous Manufacturing”, established in 1972.	- Approximately 30 m to the west; up -gradient
Certificates of Approval (CA)	95 Glen Cameron Road	- Linwood Industries Ltd. approved in 1997 for an industrial air certificate for the operation of a paint spray booth for auto body shop.	- Approximately 35 m to the east; down-gradient
Ontario Regulation 347 Waste Generators Summary (GEN)	97 Glen Cameron Road	- Admic Controls registered with waste generator number ON2503100 from 1999 to 2001, to generate waste class 252 – waste oils & lubricants.	- Approximately 60 m to the east; down-gradient
Scott’s Manufacturing Directory (SCT)		- Adaptive Microelectronics Ltd. listed as “Fabricated Plate Work (Boiler Shops)”, “Radio and Television Broadcasting and Communications Equipment”, “Communications Equipment, Not Elsewhere Classified”, “Automatic Controls for Regulating Residential and Commercial Environments and Appliances”, “Power Boiler and Heat Exchanger Manufacturing”, “Turbine and Turbine Generator Set Unit Manufacturing”, “All Other General-Purpose Machinery Manufacturing”, “Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing”, and “Measuring, Medical and Controlling Devices Manufacturing”, established in 1974.	

RiskCheck reviewed the other listings associated with the neighbouring properties (including unplottable records noted by ERIS) to determine issues of potential environmental concern to the subject property. It is our opinion that there were no other pertinent listings for the subject property and neighbouring properties from the review of the ERIS Database Report.

3.8. Other Environmental Databases and Publications

Additional environmental databases or publications were reviewed on September 8, 2025, for the subject property and the immediate adjacent and neighbouring properties (where applicable) as follows:

Database or Publication Name and Details	Results
MECP Hazardous Waste Information Network (HWIN) Registered Generator List (May 2020 to the present), database includes hazardous waste generators, carriers, and receivers registered with the MECP. Searched for the subject property only.	- No records were found for the subject property.
The archived MECP HWIN records from 1986 to 2018 were reviewed for the subject property and select surrounding properties. Only selected databases and selected years were reviewed.	- Records for the subject property and select surrounding properties were identified as detailed in Section 3.7 ERIS Report. Some details were incorporated into other sections of the Phase I ESA report (as required)

4. INTERVIEWS AND CORRESPONDENCES

4.1. Interviews

During the site visit, Mr. Lotus Zhang of 2830085 Ontario Inc., was interviewed regarding past and present environmental issues at the subject property. No potential environmental concerns were identified based on the information obtained during these interviews.

4.2. Regulatory Agencies

4.2.1. Ontario Ministry of the Environment, Conservation and Parks

RiskCheck contacted the MECP Freedom of Information and Privacy Office regarding the subject property. The MECP response is strictly limited to a search of available records including environmental concerns (general correspondence, occurrence reports or abatement), orders, historical spills and investigations/prosecutions. At the time of writing this report, no response from the MECP had been received. Should further information be received which alters the conclusions of this report, an addendum will be forwarded to the Client.

4.2.2. Technical Standards and Safety Authority

RiskCheck contacted the TSSA regarding the subject property and selected surrounding properties on September 8, 2025, to inquire about records of registered fuel tanks, which may include compliance orders, incident reports, inspection records, spills or records of contamination or specifications of the

registered fuel tanks. The TSSA response, dated September 8, 2025, indicated that no records were found for the subject property or the surrounding properties searched.

5. SITE RECONNAISSANCE

5.1. General

RiskCheck conducted an inspection at the subject property on September 2, 2025. The Phase I ESA site visit was conducted by Mr. Dennis Hsu, Principal Engineer of RiskCheck. The weather was generally overcast to partly cloudy, with an approximate ambient temperature of 21°C, based on data from the Toronto Pearson International Airport weather station. Access to the subject building was provided by Mr. Lotus Zhang of 2830085 Ontario Inc. The RiskCheck representative was accompanied during the entire site visit. RiskCheck was provided access to all exterior areas of the subject property with the exception of the roof at the time of the site visit. In addition, all interior areas of the subject building including the offices, washrooms, mechanical rooms, and kitchens associated with the office area at the subject property shipping and receiving docks, and warehouse were accessed by RiskCheck.

The exterior portions of the subject property were generally asphalt-covered for parking and access on all sides of the subject building. A landscaped area was located along the north and south portion of the subject property boundary. Vehicular access was provided by two driveways off Glen Cameron Road located at the north portion of the subject property.

No evidence of stressed vegetation, ponded water, watercourses, debris, deleterious fill materials, and significant source of noise/vibration and electromagnetic fields were observed on the subject property at the time of the site visit. It should be noted that fill would be expected to be located in the immediate vicinity of the subject building (i.e., footings).

Selected photographs of the subject property are presented in Appendix B. RiskCheck notes the Client requested no photographs of the manufacturing area be included in the report.

5.2. Asbestos

Asbestos is known to be potentially present in building materials used in buildings constructed prior to 1990. Furthermore, asbestos is still utilized in manufacturing of some cement products (Transite pipes and panels). Friable asbestos-containing materials (ACMs) are materials that when dry, can be disturbed (i.e., crumbled, powdered or pulverized) by hand or moderate pressure. Friable ACMs have a greater potential to release airborne asbestos fibres when disturbed. Non-Friable ACMs are materials that when dry, generally cannot be easily disturbed by hand or moderate pressure. Asbestos is defined as a designated substance under the *Ontario Occupational Health and Safety Act (OHSA)*, R.S.O., 1990.

Based on the construction of the subject building in approximately 1969, there is the potential for ACMs to be present in building materials at the subject property. Suspected ACMs in the accessible areas of the subject building included drywall joint compound associated with drywall walls and ceilings, acoustic ceiling tiles, flooring mastic, piping and mechanical insulation, caulking and roofing materials. At the time of the site visit, the condition of the above noted ACMs, where observed in the accessed areas of the subject property, were generally noted to be in good condition. No asbestos survey or asbestos management program (AMP) was provided to RiskCheck for review at the time of the site visit.

A Hazardous Building Materials Survey should be completed prior to any renovations and/or building demolition activities.

5.3. Urea Formaldehyde Foam Insulation

Most urea formaldehyde foam insulation (UFFI) sale and installations occurred between 1970 and its ban in 1980 under the federal *Hazardous Products Act*. Foam may be obvious at floor and wall connections and around electrical switch plates and connections.

No UFFI (or evidence of UFFI) was observed at accessible locations within the subject building.

5.4. Polychlorinated Biphenyls

The import, manufacture, and sale including for re-use of polychlorinated biphenyls (PCBs) were made illegal in Canada in 1977 and release of PCBs to the environment was made illegal in 1985 (Environment Canada, 2014). Storage and end-of-use deadlines for PCB-containing equipment are regulated federally through the Canadian Environmental Protection Act, 1999, PCB Regulations, SOR/2008-273. Handling, transportation and disposal of PCB wastes are regulated in Ontario by Waste Management – PCBs, R.R.O. 1990, Regulation 362.

PCBs were widely used in fluorescent and high intensity discharge light ballasts, transformers and capacitors prior to the early 1980s. Locations that have these types of lighting and electrical equipment installed prior to the early 1980s are considered to be potentially PCB-containing.

No PCB-containing transformers are suspected to be present within the subject building, and fluorescent lighting is presumed to be exclusively T-8 lights, which are not suspected to contain PCBs.

5.5. Lead

Lead is a soft metallic element that is stable, ductile and resistant to corrosion. It has historical widespread use in building materials because it is easy to extract/smelt and is highly malleable. Lead was commonly added to paint as a pigment, and to increase durability, resist corrosion and increase pliability. Lead can pose a health risk to humans if ingested or inhaled and is specifically a significant concern to children and pregnant women. The lead content on surfaces including paint is regulated by the federal *Surface Coating Materials Regulations* (SOR/2016-193) which defines the acceptable level of lead content in paint as 0.009% by dry weight (90 parts-per-million [ppm]). Lead is present in plumbing solder, roof flashing, batteries, noise baffles, cast iron piping gaskets and old pipes (including bell and spigot connection) manufactured or installed prior to 1990 as well as other lead-based products such as wall/radiation shielding (associated with x-ray rooms in hospitals, dental or medical clinics and laboratories). Lead may also be present in electronic components (e.g., wiring connections, wire bundles, etc.). Lead is also a designated substance regulated under the OHSA.

Based on the construction of the subject building in approximately 1969, lead or lead-containing compounds may be present in plumbing (including pipe solder) and paints. Suspected lead containing painted surfaces were observed at the time of the site visit and included walls, ceilings and mechanical/structural elements. The painted surfaces were noted to be in good condition with no major cracking or peeling paint at the time of the site visit.

In addition, lead-acid batteries are considered to be present in emergency lighting and fire alarm panels at the subject property. Lead-acid battery packs, associated with the diesel engine fire pump, were observed in the sprinkler room at the southeast portion of the subject building.

A Hazardous Building Materials Survey including a survey for all building materials and painted surfaces for lead content should be completed prior to any renovations and/or building demolition activities, to determine if any of the paint to be disturbed is lead containing.

5.6. Ozone Depleting Substances

Ozone depleting substances (ODSs) or other halocarbon alternatives (non-ozone depleting) may be present at the subject property in the form of tenant and property owned and maintained domestic refrigeration equipment, rooftop HVAC units and air conditioning units.

No refrigerant leaks were reported to RiskCheck at the time of the site visit. No halon fire suppression equipment was observed onsite.

5.7. Mould

The OHSA places a responsibility on employers and supervisors to ensure the health and safety of workers in Ontario. This includes protecting workers from mould exposure in the workplace.

No visually suspected mould growth was identified in the subject building at the time of the site visit, and no mould concerns were reported by the property representative.

5.8. Fuel and Chemical Storage Tanks

No vent or fill pipes or other evidence of underground storage tanks (USTs) were observed in the accessible exterior areas of the subject property by RiskCheck or reported by the site representative at the time of site visit. In addition, no aboveground storage tanks (ASTs) for fuel or chemical storage were observed in the accessible exterior areas of the subject property by RiskCheck or reported by the site representative at the time of the site visit.

5.9. Hydraulic Equipment and Oil Reservoirs

The subject property was not equipped with hydraulic elevators or equipment with oil reservoirs (dock levellers, compactors, etc.) at the time of the site visit.

5.10. Air Emissions

At the time of the site visit, air emissions from activities at the subject building were observed to be minimal.

Other potential air emission sources onsite could include:

1. Natural gas-fired hot water heater;

2. Natural gas-fired unit heaters;
3. Rooftop HVAC units;
4. Refrigeration equipment;
5. Washroom/bathroom exhausts; and,
6. Plumbing ventilation.

No sources of air emissions that are suspected to result in residual contamination at the subject property were identified onsite.

5.11. Chemical Inventory

Small quantities of chemicals, including general commercial cleaning supplies, paints/stains, building maintenance materials, lubricants, and adhesives, were observed onsite in containers of up to approximately 20 litres. These materials were noted throughout the warehouse area and within cabinets located in washrooms of the subject building at the time of the site visit.

No staining was observed in the vicinity of the chemical storage areas noted above. The floors at the chemical storage locations were noted to be in good condition with no significant floor cracks at the time of the site visit. No floor drains were observed in the immediate vicinity of the chemical storage areas.

5.12. Waste Management

The subject property was not registered to generate hazardous wastes, and no hazardous wastes were stored onsite at the time of the site visit.

Non-hazardous waste (general commercial waste) was not observed to be generated onsite. At the time of the site visit, the subject property was occupied by a fencing contractor, reportedly using the subject building solely for material storage, with any waste generated disposed of offsite.

No waste management concerns were noted at the subject property.

5.13. Water and Wastewater Management

The subject property was reportedly serviced by municipal water and sewers. Storm water drainage for the subject property was provided by drains located on the roof of the subject building and on the asphalt-covered areas of the subject property and through surface infiltration into the landscaped areas of the subject property.

Sanitary sewer wastewater discharge onsite appears to be limited to that from the kitchen and washrooms (i.e., toilets and sinks) as well as the cooling towers and chilled water from the extrusion loop.

5.13.1. Wells

Three (3) monitoring wells were reportedly installed on the subject property in 2016, based on records from the Ontario Wells database. However, no monitoring wells or potable water wells were observed in the accessible areas of the subject property at the time of the site visit by the RiskCheck representative, and they are presumed to have been overpaved.

5.13.2. Sumps, Pits and Below Grade Structures

No sumps (elevator, storm, sanitary) were identified at the subject property at the time of the site visit or were reported to be present by the property representative.

5.13.3. Water and Wastewater Equipment

No water or wastewater management devices were observed on the subject property at the time of the site visit.

5.14. Spill and Stain Areas

No evidence of active spills or stained areas were observed at the subject property and no spills were reported by the property representatives during this investigation.

5.15. Radon

Radon is a radioactive gas that is found naturally throughout the environment. Radon gas is typically associated with the decay of uranium found in rocks, soil, and water. Since radon is a gas, it can move freely through the soil enabling it to escape into the atmosphere or seep into buildings. When radon gas enters an enclosed space, such as a basement, it can accumulate to high levels. The level of risk associated with radon gas is dependent upon the concentration of the radon gas and the length of exposure. The Canadian Guideline for Radon in Indoor Air recommends action be taken to reduce radon levels if the average annual concentration exceeds 200 Becquerel per cubic metre (Bq/m³) in indoor air.

According to Health Canada's March 2012 report entitled "Cross-Canada Survey of Radon Concentrations in Homes", natural radon levels were found to be below the 200 Bq/m³ threshold within all of the 95 sites surveyed in the York Regional Health Unit. In addition, due to the proximity of the subject property to the City of Toronto (approximately 25 m across Steeles Avenue West), it is noted that the natural radon levels were found to be below the 200 Bq/m³ threshold within 97.3% of the 73 sites surveyed in the City of Toronto health unit. However, it should be noted that approximately 2.7% of the sites surveyed were found to have natural radon levels between 200 Bq/m³ and 600 Bq/m³.

Based on the available information to-date and no subsurface levels, radon is not expected to pose significant human health concern to the subject property; however, according to Health Canada, the only way to determine if a building has an elevated level of radon is to test for its presence, regardless of location.

5.16. Surrounding Land Use

At the time of the site visit, RiskCheck visually assessed the surrounding properties from publicly accessible locations in the Phase I ESA study area or from the subject property. The following relevant finding was observed at a surrounding property:

- Various auto repair shops, including an auto collision centre, and a community service association (Taiwanese-Canadian Community Service Association), were observed on the neighbouring property

- immediately east of the subject property at 91 & 93 Glen Cameron Road;
- Various auto repair shops (Eurolize Auto Boutique and Mr. Automotive) and a dancing academy (Stepanova Ballet Academy Inc.) were observed on the neighbouring property immediately to the west of the subject property at 83 & 85 Glen Cameron Road;
 - An auto repair shop (Simplicity Car Care) was observed on the neighbouring property approximately 35 m to the east of the subject property at 95 & 97 Glen Cameron Road; and
 - A plastic fabricator (Plastics Source), a marketing agency (AIO Agency), and an accounting firm (TACS) were observed on the neighbouring property approximately 30 m to the west of the subject property at 79 & 81 Glen Cameron Road.

At the time of the site visit, no evidence of USTs, including suspected vent or fill pipes, or ASTs were observed on the neighbouring properties from publicly accessible areas of the surrounding properties. Furthermore, no evidence of significant chemical storage or obvious evidence of significant deleterious fill materials (i.e., fill mounds or pits) were observed on the neighbouring properties from publicly accessible areas of the surrounding properties.

The current and past uses of the surrounding properties are summarized in Section 6.2.

6. REVIEW AND EVALUATION

6.1. Current and Past Uses of the Subject Property

A review of historical records indicated that the subject building was constructed in approximately 1969. The subject building was historically occupied by several professional services, including consultants, accounting firms, and telecommunications-related servicing or equipment suppliers during approximately the 1970s, followed by recording machine suppliers during the late 1970s and early 1980s. Food-related businesses occupied the property in the 1990s, followed by KP Graphics (presumed graphic design and branding company) from approximately 1990 to 2016, and Cyboray Electric Design Company (presumed electrical components design company) during the late 1990s to early 2000s. At the time of the site visit, the subject property was occupied by a fencing contractor, using the building primarily for storage of metal fences and other building materials. Prior to the construction of the subject building, the property appeared to be undeveloped or agricultural land. A review of the available historical records did not identify any RFOs, automobile servicing, or dry cleaners on the subject property.

Various commercial-grade paints, primers, stains, oils, and lubricants were observed in containers of up to approximately 20 L, scattered throughout the subject building. No staining was observed in the vicinity of the noted chemical storage areas. Floors at these locations were observed to be in good condition with no significant cracks, and no floor drains were observed in the immediate vicinity of the chemical storage areas.

KP Graphics was historically registered to generate hazardous wastes as noted in the ERIS report (see Section 3.7 for details) between 1990 to 2016. A review of all the reported years of the archived MECP HWIN databases did not indicate significant quantities of hazardous waste generation at the subject property during these periods.

KP Graphics was historically registered to generate hazardous wastes as noted in the ERIS Report (see Section 3.7 for details) between 1990 and 2016. However, a review of all reported years of the archived MECP HWIN Databases did not indicate significant quantities of hazardous waste generation at the subject property during this period.

Based on the available information to date, including the historical and current commercial and industrial activities at the subject property, the observations made during the site visit, and the absence of significant historical hazardous waste generation or storage, the potential for significant subsurface impact at the subject property appears to be low at this time.

The subject property was reportedly heated by natural gas-fired equipment at the time of the site visit. A review of available records indicates the subject building is presumed to have been consistently heated by natural gas since its construction.

No other potential environmental concerns or issues (i.e., UFFI, PCBs, ODSs, chemical storage, air emission sources, water and wastewater, or stained areas) were observed in the accessed locations of the subject property at this time.

6.2. Current and Past Uses of the Neighbouring Properties

A review of historical records indicated that the neighbouring properties south of Glen Cameron Road were developed for commercial uses, while properties to the north were developed for residential uses, predominantly in the 1960s. A review of the aerial photographs indicated that the area in the vicinity of the subject property previous to this period was agricultural and/or undeveloped land.

The following is a general description of the current and historical land use in the immediate surroundings of the subject property and discussions on the significant findings identified in the Phase I ESA study area:

Direction and Inferred Gradient	Immediate adjacent/neighbouring properties (Current occupant and current/historical land use)	Other Neighbouring Properties/Features (current land use only)	Significant Findings Identified in the Phase I ESA Study Area
North (across Glen Cameron Road); Cross-gradient	<p>Residential Properties</p> <ul style="list-style-type: none"> - Developed in approximately the 1960s - Prior to the construction of these properties, the lands to the north of the subject property were agricultural and/or undeveloped 	- Residential Properties	- None

Direction and Inferred Gradient	Immediate adjacent/neighbouring properties (Current occupant and current/historical land use)	Other Neighbouring Properties/Features (current land use only)	Significant Findings Identified in the Phase I ESA Study Area
East; Down-gradient	<p>91 & 93 Glen Cameron Road (Commercial)</p> <ul style="list-style-type: none"> - Developed in approximately the late 1960s - Prior to the construction of this property, the land to the east of the subject property was agricultural and/or undeveloped 	<ul style="list-style-type: none"> - 95 & 97 Glen Cameron Road: Commercial - 101, 103 & 105 Glen Cameron Road: Commercial 	<ul style="list-style-type: none"> - Historical and current auto repair shops with suspected ASTs at 91 & 93 Glen Cameron Road. - Historical and current auto repair shops with suspected ASTs at 95 & 97 Glen Cameron Road, along with a record of an installed paint spray paint booth at 95 Glen Cameron Road. - Admic Controls registered to generate hazardous chemical waste from 1999 to 2001 at 97 Glen Cameron Road. - Muun Sheet Metal Ltd. (presumed sheet metal fabricator) historically occupied 79 Glen Cameron Road during approximately the 1970s.
South; Cross-gradient	<p>Canadian National Railway Line</p> <ul style="list-style-type: none"> - Developed in approximately the late 1960s - Prior to the construction of the railway, the land to the south of the subject property was agricultural and/or undeveloped 	<ul style="list-style-type: none"> - 108 & 110 Doncaster Avenue: Commercial - 112, 114, 116 & 118 Doncaster Avenue: Commercial 	<ul style="list-style-type: none"> - None
West; Up-gradient	<p>83 & 85 Glen Cameron Road (Commercial):</p> <ul style="list-style-type: none"> - Developed in approximately the late 1960s - Prior to the construction of this property, the land to the east of the subject property was agricultural and/or undeveloped 	<ul style="list-style-type: none"> - 79 & 81 Glen Cameron Road: Commercial - 75 Glen Cameron Road: Commercial 	<ul style="list-style-type: none"> - Historical and/or current auto repair shops with suspected ASTs at 83 & 85 Glen Cameron Road. - A historical spill of potassium hydroxide at 83 Glen Cameron Road.

The neighbouring property immediately to the west at 85 Glen Cameron Road was historically occupied by Circo Flex (presumed circuit board manufacturer), Cook C. Lee (presumed professional office), and Mesam Supply Ltd. (presumed pneumatic power transmission equipment and parts importer) during approximately the 1970s, and by Circle Flex only during the early 1980s. The property is currently occupied by Eurolize Auto Boutique (observed auto repair shop). A review of the ERIS Database Report (see Section 3.7 for details) and the MECP HWIN Databases (1986 to 2020) did not identify any records of hazardous waste generation associated with historical or current tenants. However, based on the available information to-date, including the current occupancy and activities related to automobile repair operations with suspected fuel and lubricant ASTs, the close proximity of this property to the subject property, and the inferred up-gradient groundwater flow direction, there remains potential for subsurface concerns migrating to the subject property from this neighbouring property.

The neighbouring property approximately 20 m to the west at 83 Glen Cameron Road was historically occupied by an automobile service garage during approximately the 1990s and 2000s and is currently occupied by MR Automotive (auto repair shop). A review of the ERIS Database Report (see Section 3.7 for details) and the MECP HWIN Databases (1986 to 2020) did not identify any records of hazardous waste generation associated with historical or current tenants. A historical spill of potassium hydroxide was reported in 1989; however, potassium hydroxide is not a substance addressed under the O. Reg. 153/04 site condition standards tables and is therefore not considered a regulated contaminant of concern during this investigation. Based on the available information to-date, including the historical and current occupancy and activities related to automobile repair operations with suspected fuel and lubricant ASTs, the close proximity of this property to the subject property, and the inferred up-gradient groundwater flow direction, there remains potential for subsurface concerns migrating to the subject property from this neighbouring property.

The neighbouring property immediately to the east at 91 Glen Cameron Road was historically occupied by Compu-Data Ltd. (presumed computer services and support company) and Turner McCabe & Associates (presumed accountancy firm) during approximately the 1970s. At the time of the site visit, the property was occupied by Strong Automotive (auto repair shop) and the Taiwanese Canadian Service Association of Ontario (community service association). A review of the ERIS Database Report (see Section 3.7 for details) and the MECP HWIN Databases (1986 to 2020) did not identify any records of hazardous waste generation associated with historical or current tenants. However, based on the available information to-date, including the current observed occupancy and activities related to automobile repair operations with suspected fuel and lubricant ASTs, and the close proximity of this property to the subject property, there remains potential for subsurface concerns migrating to the subject property from this neighbouring property.

The neighbouring property located approximately 20 m to the east at 93 Glen Cameron Road was historically occupied by Calder-Gilchrist and Associates Ltd. (presumed professional consulting firm) and Thornridge Holdings Ltd. (presumed private investment/real estate holding company) during approximately the early 1980s, by Autocars North Inc. (presumed auto repair shop) during approximately the mid-1990s, and later by North Toronto Mazda Parts (presumed automotive parts supplier) during approximately the mid-1990s and early 2000s. The property is currently occupied by Borough Nissan Collision Centre (auto repair shop). A review of the ERIS Database Report (see Section 3.7 for details) and the MECP HWIN Databases (1986 to 2020) did not identify any records of hazardous waste generation associated with historical or current tenants. However, based on the available information to-date, including the historical and current observed occupancy and activities related to automobile repair operations with suspected fuel and lubricant ASTs, and the close proximity of this property to the subject property, there remains potential for subsurface concerns migrating to the subject property from this neighbouring property.

The neighbouring property located approximately 30 m to the west at 79 Glen Cameron Road was historically occupied by Dual Temp Engineering Ltd. (presumed HVAC contractor) and Muun Sheet Metal Ltd. (presumed sheet metal fabricator) during approximately the 1970s. The property is currently occupied by TACS (presumed business consulting/accounting firm). A review of the ERIS Database Report (see Section 3.7 for details) and the MECP HWIN Databases (1986 to 2020) did not identify any records of hazardous waste generation associated with historical or current tenants. Based on the available information to-date, including the reported occupancy and a separation distance of over 30 m from the

subject property, the potential for significant contaminant migration from this neighbouring property to the subject property appears to be low at this time.

The neighbouring property located approximately 35 m to the east at 95 Glen Cameron Road was historically occupied by Canadian Sealants Limited (presumed waterproofing service contractor) during approximately the 1970s, in addition to Garon Litho (presumed printing shop) and Hartland A (presumed professional services or office tenant) during the 1970s. The property was listed as C. D. Nova-Tech Inc. (presumed technology/engineering firm), Saville B. A. & Associates Ltd. (presumed consulting firm), and Wodex Technology Incorporated (presumed electronics/technology firm) during approximately the 1980s and early 1990s. It was subsequently occupied by First Canadian Auto Inc. (presumed auto repair shop) during the mid-1990s, and Linwood Motor (presumed auto repair shop) during the late 1990s and early 2000s. A record indicated registration of a paint spray booth for Linwood Industries Ltd. The property is currently occupied by Simplicity Car Care (observed auto repair shop). A review of the ERIS Database Report (see Section 3.7 for details) and the MECP HWIN Databases (1986 to 2020) did not identify any records of hazardous waste generation associated with historical or current tenants. Based on the available information to-date, including the inferred down-gradient groundwater flow direction and a separation distance of over 35 m from the subject property, the potential for significant contaminant migration from this neighbouring property to the subject property appears to be low at this time.

The neighbouring property located approximately 60 m to the east at 97 Glen Cameron Road was historically occupied by International Health Foods Ltd. (presumed health food supplier) in approximately the early 1970s, Crescent Enterprises and Crescent Salvage Co. (presumed auto recycler) during approximately the mid-1970s, H-Q Equipment Sales (presumed equipment distributor) and Marshall Refrigeration Co. Ltd. (presumed refrigeration contractor) between approximately the late 1970s and early 1980s, followed by Adaptive Microelectronics Ltd. (presumed electronic display manufacturer) and Affordable Security Sys Inc. (presumed security systems supplier) between approximately the mid-1980s and mid-1990s. The property was then occupied by Admic Controls (presumed controls/electrical systems manufacturer) during approximately the late 1990s and early 2000s. The property is currently occupied by Simplicity Car Care (observed auto repair shop). A review of the ERIS Database Report (see Section 3.7 for details) did not identify any records of hazardous waste generation associated with historical or current tenants except for Admic Controls. However, the MECP HWIN Databases (1986 to 2020) did not report significant quantities of hazardous waste associated with Admic Controls during its occupancy. Based on the available information to-date, including the absence of significant hazardous waste generation, the inferred down-gradient groundwater flow direction, and a separation distance of over 60 m from the subject property, the potential for significant contaminant migration from this neighbouring property to the subject property appears to be low at this time.

Based on the initial development of the neighbouring properties, it is most likely that the neighbouring properties were heated by natural gas fired equipment. At the time of this site visit, no obvious visual evidence of USTs or ASTs (i.e. no vent and/or fill pipes or fill ports) associated with fuel oil storage (i.e. for heating) were observed from public properties and/or publicly accessible portions of the neighbouring properties. Based on the available information to-date, the potential for significant contaminant migration to the subject property due to historical fuel oil use at the neighbouring properties appears to be low at this time.

7. CONCLUSIONS AND RECOMMENDATIONS

The following potential environmental concerns from past and current activities in the neighboring properties have been identified:

- Current and historical auto service operations at the neighbouring property immediately to the west, at 83 & 85 Glen Cameron Road with suspected ASTs; and
- Current and historical auto service operations at the neighbouring property immediately to the east, at 91 & 93 Glen Cameron Road with suspected ASTs.

A Phase II ESA is recommended to be completed at the subject property to confirm the subsurface conditions at this time based on the above noted potential environmental concerns.

The following additional finding was also made by RiskCheck:

- Based on the construction of the subject building in approximately 1969, there is the potential for ACMs to be present in building materials at the subject property. Suspected ACMs in the accessible areas of the subject building included drywall joint compound associated with drywall walls and ceilings, acoustic ceiling tiles, flooring finishes, piping and mechanical insulation, caulking and roofing materials. At the time of the site visit, the condition of the above noted ACMs, where observed in the accessed areas of the subject property, were generally noted to be in good condition. No asbestos survey or asbestos management program (AMP) was provided to RiskCheck for review at the time of the site visit. An asbestos survey will be required for the subject property in accordance with Ontario Regulation (O. Reg.) 278/05 under the Ontario Occupational Health and safety Act (OHSA). An AMP should be implemented if ACMs are confirmed to be present in the subject building.

A Hazardous Building Materials Survey should be completed prior to any renovations and/or building demolition activities.

At the time of issuance of this report, a response had not been received from the Ontario Ministry of the Environment, Conservation and Parks (MECP) Freedom of Information and Privacy Office regarding a search of their records for any pertinent information on the subject property. Should further information be received which alters the conclusions of this report, an addendum will be forwarded to the Client.

8. CLOSURE

This report has been prepared for 2830085 Ontario Inc. (Client). The information and conclusions outlined in this report cannot be used by third parties without the expressed written consent of the Client and RiskCheck.

It should be noted that the findings and results contained in this report are limited to site conditions at the time of the Phase I ESA and information obtained from available documents, records and interviews. RiskCheck does not claim responsibility for undisclosed environmental concerns that may result in costs for environmental clean-up, remediation or any other consequential loss.

Any quantities or areas (including but not limited to damaged areas, mould affected areas, asbestos or lead containing materials, chemicals, contaminated media) provided in this report are order-of-magnitude values or estimates and should not be considered as exact values. Should there be a requirement for abatement (e.g. asbestos, lead or mould) or remediation services (e.g. soil or groundwater), the estimated quantities or areas noted are not to be used for tender documents or providing quotations or for any other business decisions without prior consent from RiskCheck. A more detailed site investigation may be required to verify the quantity and/or areas of materials and site conditions that may affect the overall project cost. Furthermore, it is important to note that the conditions of the potential hazardous building materials or areas of subsurface contamination may have changed since the time of the RiskCheck site visit or investigation. RiskCheck will not be held responsible for any deviations in the estimated quantities or areas documented.

The Phase I ESA is not intended to fulfil the requirements of Ontario Regulation (O. Reg.) 153/04 for the purposes of supporting filing of a Record of Site Condition with the Ontario Ministry of the Environment, Conservation and Parks (MECP).

The limitations outlined in this closure section are supplemental to our Limitations, Terms and Conditions of Retainer, attached to this report as Appendix E and applies to all work performed.

We trust the information presented herein meets your requirements. Should you have any questions or require additional information, please do not hesitate to contact the undersigned.

Yours truly,

9. QUALIFICATIONS OF ASSESSORS

RiskCheck Environmental is a privately held Canadian company incorporated in 1999. Our mandate is to remain solely focused on providing top quality Environmental Consulting Services.

Mr. Dennis Hsu, P.Eng. has over 13 years of environmental consulting, project management and contracting experience including Phase I ESA, Phase II ESA, and contaminated site remediation projects for real estate and financing due diligence, property risk management and compliance, and brownfields re-development. Mr. Hsu is responsible for technical review, technical proposals, project management, and management of junior staff. Mr. Hsu graduated from the University of Toronto with a Master of Applied Science in Chemical Engineering degree, and is licensed with the Professional Engineers Ontario, and is a Qualified Person for environmental site assessments as defined in the amended O. Reg. 153/04.

Mr. Carlos Cen Wu, M.Eng. and EIT, is a Project Coordinator and CAD Technician at RiskCheck and has completed Phase I ESA and Phase II ESA projects, soil and groundwater sampling, asbestos surveys/reassessments and Hazardous Building Materials Assessments/Designated Substances Surveys in various properties throughout Southern Ontario. He graduated from the University of Toronto in 2015 with a Bachelor's and a Master's in Chemical Engineering, along with a minor in Sustainable Energy.

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Verisk's records relating to the described property (hereinafter referred to as the "Property"). Verisk makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Verisk's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Verisk does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Verisk disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Verisk Reports or from any tortious acts or omissions of Verisk's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property: 31576 - 89 Glen Cameron Rd

Provincial

[AGR](#)

This database of licensed and permitted pits and quarries is maintained by the Ontario Ministry of Natural Resources and Forestry (MNR), as regulated under the Aggregate Resources Act, R.S.O. 1990. Aggregate site data has been divided into active and inactive sites. Active sites may be further subdivided into partial surrenders. In partial surrenders, defined areas of a site are inactive while the rest of the site remains active.

Government Publication Date: Up to Nov 2024

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-May 2025

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial

[AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Apr 30, 2025

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2023

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Apr 30, 2025

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Jul 2025

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Jun 2025

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Jul 31, 2025

Drill Hole Database:

Provincial [DRL](#)

The Ontario Drill Hole Database (ODHD) is offered by the Province of Ontario's Ministry of Mines. The dataset contains information for over 164,000 percussion, overburden, sonic and diamond-drill holes. The presence of assay results with cutoff values for gold, silver, copper, zinc, lead, nickel and platinum group elements is noted. Drill hole data are compiled from assessment files that have been submitted to the ministry in accordance with the Ontario Mining Act (OMA). Source assessment file numbers are captured for cross reference with the Ontario Assessment File Database (OAFD). Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Aug 2024

Delisted Fuel Tanks:

Provincial [DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Oct 2023

Environmental Activity and Sector Registry:

Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011 - Jun 30, 2025

Environmental Registry:

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Jul 31, 2025

Environmental Compliance Approval:

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011 - Jun 30, 2025

Environmental Effects Monitoring:

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Apr 30, 2025

Environmental Issues Inventory System:

Federal [EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial **EMHE**

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Apr 30, 2022

Environmental Penalty Annual Report:

Provincial **EPAR**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment, Conservation and Parks (MECP). These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2024

List of Expired Fuels Safety Facilities:

Provincial **EXP**

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Federal Convictions:

Federal **FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal **FCS**

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jan 2025

Fisheries & Oceans Fuel Tanks:

Federal **FOFT**

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal **FRST**

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: Oct 31, 2021

Fuel Storage Tank:

Provincial **FST**

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Fuel Storage Tank - Historic:

Provincial **FSTH**

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial **GEN**

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. As of January 1, 2023, businesses and institutions subject to the amended Reg. 347: General – Waste Management are required to report their activities and pay fees through Resource Productivity & Recovery Authority (RPRA) online Hazardous Waste Program Registry (HWPR) rather than the Hazardous Waste Information Network (HWIN) system previously operated by the Ministry of the Environment, Conservation and Parks (MECP). Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Mar 31, 2025

Greenhouse Gas Emissions from Large Facilities:

Federal **GHG**

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Apr 2024

TSSA Historic Incidents:

Provincial **HINC**

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal **IAFT**

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial **INC**

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: 31 Oct, 2023

Landfill Inventory Management Ontario:

Provincial **LIMO**

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 31, 2022

Canadian Mine Locations:

Private **MINE**

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial [MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2025

National Analysis of Trends in Emergencies System (NATES):

Federal [NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial [NCPL](#)

The Ministry of the Environment Conservation and Parks (MECP) provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act. MECP publicly releases the Environmental Compliance Report (ECR) on the Ontario Data Catalogue. In Ontario, all facilities with regulated wastewater discharges or air emissions under the Ontario Water Resources Act and the Environmental Protection Act must monitor and report any cases where approved operating limits have been exceeded.

Government Publication Date: Dec 31, 2023

National Defense & Canadian Forces Fuel Tanks:

Federal [NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal [NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Nov 2023

National Defence & Canadian Forces Waste Disposal Sites:

Federal [NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal [NEBI](#)

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Jun 30, 2025

National Energy Board Wells:

Federal [NEBP](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPR2

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of pollutant releases (to air, water and land), disposals, and transfers for recycling. The inventory, managed by Environment and Climate Change Canada, tracks over 300 substances. Under the authority of the Canadian Environmental Protection Act (CEPA), owners or operators of facilities that meet published reporting requirements are required to report to the NPRI.

Government Publication Date: Feb 2024

National Pollutant Release Inventory - Historic:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. This data holds historic records; current records are found in NPR2.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Jun 30, 2025

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the Ministry of Natural Resources (MNR) handed over to the Ontario Oil, Gas and Salt Resources (OGSR) Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database includes well owner/operator, location, permit issue date, and well cap date, license number, status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provided for each well record.

Government Publication Date: 1800-Aug 2024

Inventory of PCB Storage Sites:

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Jul 31, 2025

Canadian Pulp and Paper:

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial

PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011 - Jun 30, 2025

Ontario PFAS Spills:

Provincial

PFAS

This specific list of spills includes those incidents where one or more of the listed contaminants are identified in the PFAS Structure List and/or PFAS Chemicals Without Explicit Structure List made available by the United States Environmental Protection Agency (US EPA), is originally sourced from the Ministry of the Environment, Conservation and Parks spills related data. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug 2024; Oct-Nov 2024

NPRI Reporters - PFAS Substances:

Federal

PFCH

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per- and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This listing of PFAS substance reporters includes those NPRI facilities that reported substances that are found in either: a) the Comprehensive Global Database of PFASs compiled by the Organisation for Economic Co-operation and Development (OECD), b) the US Environmental Protection Agency (US EPA) Master List of PFAS Substances, c) the US EPA list of PFAS chemicals without explicit structures, or d) the US EPA list of PFAS structures (encompassing the largest set of structures having sufficient levels of fluorination to potentially impart PFAS-type properties).

Government Publication Date: Feb 2024

Potential PFAS Handlers from NPRI:

Federal

PFHA

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per- and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This list of potential PFAS handlers includes those NPRI facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used, or released by the facility - these are facilities that potentially handle PFAS based on their industrial profile.

Government Publication Date: Feb 2024

Pipeline Incidents:

Provincial

PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing is an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Potential PFAS Handlers from EASR:

Provincial

PPHA

The Ontario Environmental Activity and Sector Registry (EASR), described in Ontario Regulation 245/11, allows businesses with less complex operations - and hence not requiring an Environmental Compliance Approval - to register their activities with the Ontario Ministry of the Environment, Conservation and Parks (MECP). This list of potential PFAS handlers includes those EASR facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used.

Government Publication Date: Jun 30, 2024

Private and Retail Fuel Storage Tanks:

Provincial

PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Jul 31, 2025

Ontario Regulation 347 Waste Receivers Summary:

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2021

Record of Site Condition:

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09). The Government of Ontario states that it is not responsible for the accuracy of the information in this Registry.

Government Publication Date: 1997-Sept 2001, Oct 2004-Jul 2025

Retail Fuel Storage Tanks:

Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Apr 30, 2025

Scott's Manufacturing Directory:

Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial SPL

List of spills and incidents made available by the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug 2024; Oct-May 2025

Wastewater Discharger Registration Database:

Provincial SRDS

Facilities that report either municipal treated wastewater effluent or industrial wastewater discharges under the Effluent Monitoring and Effluent Limits (EMEL) and Municipal/Industrial Strategy for Abatement Regulations. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment keeps record of direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation, Mining, Petroleum Refining, Organic Chemicals, Inorganic Chemicals, Pulp & Paper, Metal Casting, Iron & Steel, and Quarries.

Government Publication Date: 1990-Dec 31, 2021

Anderson's Storage Tanks:

Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Apr 2024

Variances for Abandonment of Underground Storage Tanks:

Provincial

[VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory:

Provincial

[WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011 - Jun 30, 2025

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX E

LIMITATIONS, TERMS AND CONDITIONS OF RETAINER

RISKCHECK ENVIRONMENTAL LTD.

LIMITATIONS, TERMS AND CONDITIONS OF RETAINER

1. **Our Standard of Care** - RiskCheck Environmental Ltd. (RiskCheck) will conduct/has conducted the work as specified in the scope of work, contained in the RiskCheck proposal and/or the engagement letter, and perform/performed the environmental investigations requested by the Client according to the standards of a reasonable environmental consultant ("Retainer"). Any work performed by RiskCheck is conducted in accordance with generally accepted engineering or scientific or environmental practices current in the location and at the time the work is performed. No other warranty, expressed or implied is made.
2. **Our Sources of Information** - RiskCheck will/has sought to obtain relevant information, statements, documents and analytical test results concerning the subject property from our Client, third party sources, government or regulatory publications, databases and officials, and other persons to the extent covered by our Retainer. The accuracy of the findings, opinions and conclusions expressed in the RiskCheck report and/or any deliverables ("Deliverables") are subject to any errors or omissions in, or refusals to provide, information. RiskCheck shall not be responsible for any deficiency, misstatement, or inaccuracy contained in the Deliverables as a result of relying on the above information or lack thereof.
3. **Site Inspections** - RiskCheck will complete/has completed the inspection(s) of the subject property in the manner covered by our Retainer. The purpose of our inspection is to identify obvious visible evidence of potential and/or actual sources of environmental contamination and patent irregularities in waste management practices at the subject property. Our findings during the site inspection(s) are subject to any restrictions placed upon our free access to all aspects of the subject property, and neighbouring properties, including but not limited to snow coverage and material storage. A reasonable site inspection may not identify latent or hidden contamination, evidence of potential environmental concerns or irregularities.
4. **Sample and Testing Procedures** - The sample and testing procedures described in the Deliverables, are performed at specific point locations, by experienced personnel using equipment and techniques appropriate for our Retainer. Based upon available data, RiskCheck provides expressed opinion as to the conditions, which may exist between the points investigated, and is based on the location and time of sample collection, and the type of media and parameters analyzed. As actual conditions may vary significantly between sample or test points, and with time, our Client assumes the inherent risk that some conditions may not be detected. RiskCheck shall not be responsible for any cross-contamination resulting from subsurface investigations.
5. **Legal Issues** - The Deliverables are intended to direct our Client's attention to potential and/or actual sources of environmental contamination, including but not limited to, irregular waste management practices at the subject property. Nothing in the Deliverables are intended to express any legal opinion upon environmental liabilities relating to the subject property or whether site operations legally conform with relevant legislative requirements. RiskCheck makes no other representations or warranties whatsoever, including those concerning the legal significance of our findings, or as to other legal matters noted in the Deliverables, including but not limited to, ownership of any property, or the application of any law, to the facts set forth herein.

RISKCHECK ENVIRONMENTAL LTD.

LIMITATIONS, TERMS AND CONDITIONS OF RETAINER

6. **Confidentiality of Client Information** – RiskCheck agrees to hold all information obtained in the course of our Retainer and the contents of the Deliverables in strict confidence, except where disclosure is directed by our Client's expressed written consent with instructions, or by compulsion of law.
7. **Working Information/Documents** – The Deliverables shall be the property of RiskCheck's Client. All other data, sample and test results, working sheets, draft reports or other papers, documents, information or records prepared or collected by us in the course of our Retainer, shall remain the property of RiskCheck Environmental Ltd. and/or successors. Our Client agrees that we shall be entitled to retain a copy of the Deliverables for RiskCheck's own files.
8. **Use of the Deliverables** – The information and opinions expressed in the Deliverables are prepared for the sole benefit of our Client. No other party may use or rely upon the Deliverables, or any portion thereof, without the express written consent of RiskCheck Environmental Ltd. and/or successors. We accept no responsibility for the accuracy of the Deliverables to other parties. We give no warranty, representation, or assurance to other parties, that the findings, statements, opinions or conclusions expressed in the Deliverables are accurate or valid. RiskCheck, at its discretion, will consent to any reasonable request by our Client to approve the use of the Deliverables by other parties as "Approved Users" within one year from the date of the Deliverables.
9. **Copyright** – RiskCheck owns copyright of the Deliverables. We authorize our Client and "Approved Users" to make copies of the Deliverables only in such quantities as are reasonably necessary for its use by those parties. Our Client and Approved Users may not give, lend, sell, or otherwise make available our Deliverables, or any portion or copy thereof, to any party, without our express written consent. No person may alter or modify the Deliverables.
10. **Personal Liability** – The Client and/or "Approved User" expressly agrees that RiskCheck employees shall have no personal liability to the Client and/or "Approved User" with respect to a claim, whether in contract, tort and/or any other cause of action in law. Furthermore, the Client and/or "Approved User" agrees that it will bring no proceedings, nor take any action in any court of law, against RiskCheck employees in their personal capacity.
11. **Professional Liability** – RiskCheck will not be responsible for any consequential or indirect losses incurred by the Client and/or "Approved Users", including but not limited to, loss of income, business opportunities, business interruptions, personal injury or death.
12. **Subconsultant and Contractor Liability** – RiskCheck on certain investigations/assessments (including but not limited to subsurface investigations, laboratory services, remediation, risk assessments, abatements) will require hiring the services of individuals and companies with special expertise and/or services, which are not provided by RiskCheck. RiskCheck may retain these services on behalf of the Client, as part of the overall project, as a convenience to the Client. RiskCheck shall not be responsible for errors, omissions or negligence by those parties in carrying out their work. These will be the responsibility of the subconsultant and contractors retained for completion of the project. The Client indemnifies RiskCheck from all such claims associated with the work carried out by subconsultant and contractors.
