

# Pulaski / Giles County Airport

Runway 16/34 is 5310ft. long by 75 ft. wide asphalt in excellent condition. New medium intensity runway edge lights are always on at night and are adjustable via a pilot-controlled, radio-activated system. Both ends of the runway have PAPIs, which keep landing pilots on a safe glide path, and REILs, which are strobes that help pilots locate the ends of the runway when visibility is poor.

Runway 34 has a GPS RNAV/ LPV approach with 250 ft minimums for WAAS equipped aircraft. Runway 34 also has a VOR/DME approach. Runway 16 has a GPS RNAV approach. We have a NEXWAS automated weather station located on the airport. Pilots can obtain current weather at the airport by listening on frequency 118.275 or by calling 931-363-6760.

A courtesy phone is available in the outer lobby for local and toll free calls. The pilot's lounge has comfortable La-Z-Boy furniture, cable television, microwave and a small fridge. Pilots have access to a computer for weather briefing and flight planning and wi-fi is available for use with laptops and iPads. Free ice is available as is a vehicle for pilots to get into town for lunch.

Our terminal building is attached to the original storage hanger that was built when the airport was first developed. It has a modern, well furnished lobby with a comfortable conference seating area, a pilot's lounge and a shower is provided in the men's restroom. There is an outer lobby that is open 24 hours with vending machines and a comfortable table and chairs.
