LandScape Segment Descriptions

Managing Business (C2)

Managing Business neighborhoods are largely 30- somethings, but also have an above- average number of residents over 65- years- old. This demographic measurement no doubt contributes to these areas slightly below- national- average percentage of families with children and slight up- tick in widows and widowers. As a result, it's easy to imagine that the younger residents may help the older ones with small home repairs, while the older residents may water plants when their younger neighbors go on vacations. Naturally this demographic impacts the areas' higher- than- average level of social- security income. This, combined with an on- average level of salaries from middle- class, white- collar jobs, and a slightly higher level of interest/dividend income, puts residents in Managing Business areas at a comfortable \$50,000 and \$60,000 income range. For those still in the workforce, the above- average occupation categories include: office administration, protective services, and repair services. As a group, these Urban Cliff Dwellers have some minimal level of college education.

Regents (A6)

Regents are highly urban Creme de la Creme neighborhoods with the vast majority of their residents in their 40s, fewer- than- average children under 17 years old, and a higher- than- average number of 65- plus- year- olds. Though they have fewer children, the residents in these areas have a higher- than- national- average quota of married couples. Also higher- than- average are the number of college- educated residents, people employed in white- collar management and professional positions, and income from retirement investments/social security. The combination of income avenues, put these neighborhoods solidly in the \$70,000s to \$80,000s median annual income range - making their "middle- age" years extremely financially secure and materially comfortable.

Wizards (E2)

What could be better than being in your 30s, having a college degree and a professional career, having no children, and earning in the \$50,000s and \$60,000s? Apparently, the cherry on top of this scenario for residents of the highly urban Wizards neighborhoods is having all that plus being single. These segments, which are in the urban Thriving Alone category, are dominated by 30- something single people, who are alone mainly either because they've never been married or because they are divorced. These neighborhoods measure at higher- than- twice- the- national- average in non- family households. Indeed, you won't find many children or people in their retirement years among the Wizards. What you will find is a relatively youthful group that enjoys their relatively high incomes from salaries earned in white- collar management and professional careers. These residents also earn a slightly higher- than- average level of income from interests/dividends and self- employment income - indicating that there are many smart investors and entrepreneurs (and no doubt savvy spenders) among the inhabitants. After a hard- charging 9- to- 5 workweek, Wizards likely bust out on the weekends to spend their time reveling in child- free entertainment and to spend their money enjoying their independent lives.

Urban Squires (A5)

Urban Squires have the greatest number of national- average measurements than other segments within the Creme de la Creme category. But, however ordinary these Urban Squire residents may appear, they are definitely living very comfortably compared to the nation as a whole, with a median income range in the \$70,000s and \$80,000s. The residents of these highly urban areas tend to be in their 30s, but weigh in at an average level in all other age categories. Other national- average measurements include married- with- children, income from wages, and social security income. Urban Squires' standout characteristics included a twice- the- national- average level of college- educated residents, a slightly higher level of residents employed in white- collar management and professional jobs, and a higher level of income from interest/dividends.

Hard Act to Follow (F1)

Hard Act to Follow segments are highly urban areas with a predominantly single population in their 30s and without children. In fact, these Going it Alone areas weight in with a nearly 50- percent- above- average level of singles. The households are single for a variety of reasons, including slightly higher- than- average levels of divorce, widowhood, and non- marriage. This group has some college education and an average annual income level in the \$30,000s and \$40,000s. The source of income for these singles is predominately wages from white- collar jobs in occupations such as office administration, food service, sales, healthcare, and personal care. One might logically expect to find Hard Act to Follow residents willing to explore dating opportunities, but not sitting at home on weekends waiting for the phone to ring. Instead, they're likely enjoying a full life of leisurely mornings over coffee and the newspaper, and evenings at movies, the theater, and museums.

Gainfully Employed (C4)

True to their Urban Cliff Dwellers category, Gainfully Employed neighborhoods are distinguished by a dominant age range in the 30s. But they are not entirely generationally homogenous, because they are also home to an above- average number of 65- plus- year- olds. This fact speaks to their slightly- less- than- average percent of children in their largely two- couple families. This fact also gives these areas a nearly- dead- on- average income from wages and salaries, as well as a somewhat higher- than- average income from retirement/social security. For those who are still working, their primary occupations are production, repair services, transportation, office administration, and healthcare support. The salary range for Gainfully Employed is \$30,000s to \$40,000s.

Social Whirls (C1)

Enjoying their very comfortable \$50,000 to \$60,000 income range, the married- with- children residents of highly urban Social Whirls neighborhoods within the Urban Cliff Dwellers category will have plenty to keep them busy and spending on in the coming years, as their children continuing to grow into their teenage years. Although these areas' residents depend on wages to pay their bills, they also enjoy a slightly above- the- national- average income from interest/dividends. This is likely to help make the extra car payments for their teenagers and start college funds. Though their occupation categories span the range of typical middle- class white- collar jobs, they tip slightly above- average in a few categories, including protective services, office administration, and repair services. The higher salaries of the residents speak to the fact that some residents have some level of college education.

Collegians (O7)

According to the U.S. Dept. of Labor's Bureau of Labor Statistics, in October 2004, 66.7% of high- school graduates from the class of 2004 were enrolled in colleges or universities across the United States. This is obviously a huge annual boon to retailers who sell the staples of college life, including low- cost dorm- style furniture, pens and notebooks, and inexpensive home furnishings. Collegians areas are home to currently enrolled college students living in either dorms or off campus areas dedicated to college students. Market researchers will find a very homogenous group of young adults within these unique areas. Collegians are home to residents sharing a median- age- range in the 20s and low- 30s. They are predominately not married, and have no children. Naturally, they all have high- school degrees. For those students who are working to help pay the ever- increasing cost of higher education, they are employed a mix of white- and blue- collar occupations, such as protective services (over- two- times- average), personal care (nearly two- times- average), and management and sales(nearly 50- percent- above- average). Through these jobs they generate annual incomes at the low- \$30,000s- or- less range. Residents in these areas generate almost no public- assistance income.

Legacy Years (O6)

There are two images of that come to mind when you say "senior citizen" in the United States. One is of a very well off retired person living out their golden years in comfort. A second image is of an older person who is struggling to make ends meet and suffering the indignities of a combination of old- age and low- income. Legacy Years are areas representing households that are fully retired with residents on very tight budgets. The median age in these neighborhoods is the 50s and low- 60s, but they also have a nearly three- times- the- national- average number of people over 65- years- old. The median income of these households is the low- \$30,000s or less. While many residents are drawing on social security and retirement income, they also have a 75- percent- above- average ranking in public- assistance. This group of senior citizens also ranks above- average on several occupational categories, which is either a reflection of the employment of the younger members of the neighborhood or the need for some seniors to continue working. They show above- average levels of employment in both blue- and white- collar jobs in these areas: healthcare support, building maintenance, farming/fishing/forestry, protective services, and food preparation. An above- average percent have high- school degrees, but a higher percent have less- than- high- school educations. These areas have an average

Centurions (O5)

It would come as no surprise to most people that military personnel living across the country have their own unique demographics and lifestyle segmentation characteristics from non- military people. Just one example of this, and reason for this fact, is that this population tends to retire at a considerably younger age than workers in civilian sectors. Among the explanations for this pattern is that many military tasks require the physical stamina of youth. Market segmentation bears out this fact, as the population of Centurions segments are in their 20s and low- 30s. Centurions neighborhoods are classified as highly urban areas with households dominated by military personnel. Other commonalities of the residents include salary ranges in the high- \$30,000s and the \$40,000s, and a two- times- the- national- average percentage of married- couple- with- children households. Their income is generated largely from salaries; and this segment has a very low level of income from public- assistance. No doubt owing to their younger age, there is a significantly above- average level of children under six- years- old. This group also has a nearly two- times- the- average number of people with some years of college under their military belts. Their occupational ranking is a mix of white- collar and blue- collar jobs in areas such as healthcare support, protective services, personal care, and farming.

Doublewides (O4)

In America there tends to be a particular stigma attached to living in mobile homes and mobile home parks, but in fact, many people chose this lifestyle as a preference for several reasons, including mobility and low- cost housing. In fact, the median income of residents of Doublewides neighborhoods is a very respectable high- \$30,000s and \$40,000s. Doublewides are areas where mobile homes dictate the lifestyles of the residents, who share a median age in the 30s. While residents in Doublewides do have a higher- than- average level of income from public- assistance, many others are hardworking Americans, with a higher- than- average representation in several manual- labor blue- collar occupations, including farming/fishing/forestry (nearly three- times- average), construction (75% above average), repair services (50% above- average), transportation (50% above- average), and production (nearly 50% above- average). These occupations are a reflection of the residents' low educational achievements: There is an over- 50% average number of people with less- than- high- school educations. However, 25% above- average have high- school degrees. Also owing to their residents' ages, these areas have slightly more younger children than older. They tend to have married- couple households, but also have a nearly 50% higher- than- average number of single- fathers.

Group Quarters (O3)

Group Quarters is the name of the neighborhoods identified as home to people living predominately in apartments or other group housing quarters. The residents of multifamily rental housing are different from both homeowners and single- family home renters. It's logical to imagine this group being much more transient than home- owning citizens, and not investing as much in their home purchases. Apartment renters account for 15% of all U.S. households by a narrow definition that restricts the count to residence in structures with at least five apartments. A broader definition of two to four apartments per quarters increases this percentage to 22%. Among the shared demographics of the highly urban Group Quarters residents are a median- age in the 30s, very few children, more singles than married- couples, and a two- times- the- national- average level of people with less- than- high- school educations. Income for these rental- housing residents ranks 50- percent- higher- than- average on public- assistance. However, many of the residents are employed in blue- collar jobs, such as farming/fishing/forestry (nearly four- times- average), protective services (nearly two- and- a- half- times- average), and healthcare support, building maintenance, and transportation (all about 25- percent- above- average). Incomes are in the high- \$30,000s and \$40,000s ranges.
