ADDENDA (COMPLETE)

Urbanova is a unique living environment that relies on its natural character, on the density of its population, on the proximity of services and on specific facilities that make it possible to opt for active transportation rather than the car.

The density of housing and activities is particularly crucial for businesses and local services which can only set up if there is a sufficient clientele made up of inhabitants, workers or passers-by.

Promoting collective and active modes of travel is therefore one of the essential components of Urbanova. More sidewalks, complete cycling network, improved bus routes: everything will be put in place to allow efficient travel in the neighborhood for your customers.

- * Bus stops every 300 meters;
- * Safe and pleasant pedestrian paths near stops;
- * Bike racks and secure bike locations near targeted stops

One of the major aspects of Urbanova is to offer a development plan that allows for greater population density in residential areas, while promoting a mix of uses.

The mix of uses and denser development favor the presence of a large number of diversified urban functions at a short distance from each other (various and varied activities and businesses, transport and communication networks, public services, parks and green).

Possibility of negotiating the construction of interior finishings with the landlord and spreading their costs monthly over the duration of the lease
